**wonderful to have you here.**

monumental memories require our eyes to recognize them as such and a certain spontaneity in order to be able to react to them adequately. emotions, tonality, attitudes. bringing all of these things together simultaneously creates the challenge of translating what just has been experienced into an experience. this deep and primal human desire for expression evokes space in a possible visual language. exploring and creating the imagery sets the essence that lies within photography. so i try to understand photography as a tool to translate all these moments true to life. it is said that “a picture is worth a thousand words”, but if there were a few then i’d like to come up with these:

stay careful for the mindful.

A handwritten signature in black ink, appearing to read 'Peligate' with a stylized flourish at the end.

## **my services**

my focus in the photo shooting area relates to the location search, the dialogue conversation, the shooting itself, the editing and providing the data. the photos are taken with an iphone 15 pro max, even in raw format if desired. the standard export is done in png format and the data is made available for two weeks via a cloud function (google drive).

## **wedding photography**

in the area of wedding photography, there is no need to search for a location and a dialogue discussion lasting up to 60 minutes is offered in two forms, as a pre- and post-meeting including a viewing of the edited photos.
